Profile

Backend engineer with hands-on experience designing, scaling, and maintaining five production systems at Softvence IT Ltd across travel technology, SaaS, generative AI video processing, and online marketplaces. Built high-throughput RESTful services managing 1,000+ travel products, integrated 18 third-party APIs including Stripe, PayPal, Paddle, GlobalTix, and Bókun, and established automated CI/CD deployment pipelines. Consistently delivered 35ms database query latency and under 180ms p95 API response latency through query optimization, composite indexing, and Redis caching. Strong focus on database transaction security, webhook idempotency, and automated test coverage across core business workflows. Available immediately.

Skills

Programming Languages & Backend
PHP 8.3 / 8.4, Laravel 12, RESTful API Design, Eloquent ORM, MVC Architecture, Service-Repository Pattern, SOLID Principles, Queue Workers

Databases, Caching & Performance
MySQL 8, Redis (Response Caching, Queue Driver), Pessimistic Locking, Database Transactions, Composite Indexing, Eager Loading (N+1 Elimination)

AI Development & Automation
OpenAI API (GPT-4o), Google Gemini API, Anthropic Claude API, Multi-Provider LLM Abstraction, Kling AI, ElevenLabs, n8n, Antigravity, Prompt Engineering

Third-Party Integrations & Payments
Stripe (PaymentIntents, Webhooks), PayPal REST v2, Paddle Billing v2 (Ed25519), GlobalTix API, Bókun API (HMAC-SHA1), Firebase (FCM, Auth), RevenueCat

DevOps & Cloud Deployment
Linux, SSH, Nginx, Supervisor Daemons, Cron, DigitalOcean VPS, Hostinger CloudPanel, SiteGround, cPanel, Docker Compose, GitHub Actions (CI/CD)

Frontend, Full-Stack & Mobile
Blade, Inertia.js, React, Livewire, Alpine.js, Tailwind CSS, Bootstrap, TypeScript, Vite, Flutter (Mobile UI, API Integration, In-App Payments)

Experience

12/2025 - 09/2026
Dhaka, Bangladesh

Softvence IT Ltd, ***Executive, Laravel***
Experience letter available on request

- Architected and delivered backend services and RESTful APIs for five live production systems across travel commerce, education SaaS, AI processing, and real-time marketplaces using Laravel 12 and PHP 8.3/8.4.
- Optimized database query structures and caching across 1,000+ travel products, eliminating N+1 query bottlenecks (cutting queries by 98% from 201 to 3) to achieve 35ms database query latency and under 180ms p95 API response latency on live traffic.
- Engineered memory-safe background data ingestion pipelines utilizing chunked queue jobs, isolated worker pools, and concurrency locks, reducing peak CLI memory from 500MB+ to under 45MB flat across 1,000+ records.
- Implemented multi-gateway payment processing (Stripe, PayPal, Paddle Billing v2) with cryptographic signature validation (HMAC-SHA1, HMAC-SHA256, Ed25519) and pessimistic database locking to guarantee financial transaction idempotency and zero duplicate charges.
- Designed a pluggable multi-provider AI vision abstraction layer enabling runtime zero-downtime provider switching between OpenAI GPT-4o, Google Gemini, and Anthropic Claude via configuration.
- Automated CI/CD deployment pipelines using GitHub Actions across DigitalOcean VPS, Hostinger VPS, SiteGround, and cPanel environments, configuring Nginx, Supervisor workers, and Cron schedulers.

08/2024 - 04/2025
Dhaka, Bangladesh

Genex Infosys (Grameenphone), ***Customer Service Officer***

- Resolved technical service inquiries and customer issues using enterprise CRM tools, maintaining high resolution rates and quality compliance.
- Documented client workflows, tracked service escalations, and prepared operational performance reports for back-office teams.

01/2023 - 07/2024
Dhaka, Bangladesh

Edison Group, ***Technical Assistant***

- Maintained IT hardware systems and performed quality assurance testing on mobile and computing devices to ensure hardware reliability.
- Coordinated assembly line technical workflows, documented maintenance logs, and assisted with internal technical audits.

Education

2023 - 2027
Dhaka, Bangladesh

Bachelor of Science in Computer Science & Engineering (ongoing) - CSE -
Bangladesh University of Business & Technology (BUBT), Dhaka

2019 - 2023
Dinajpur, Bangladesh

Diploma in Computer Science & Technology - CSE - (CGPA: 3.75 / 4.00)
Dinajpur Institute of Science & Technology, Dinajpur, Bangladesh

2018 - 2019
Saidpur, Bangladesh

Secondary School Certificate (SSC) - Science - (GPA: 4.50 / 5.00)
Lions School and College, Saidpur, Bangladesh

Online Travel Agency Experiences Marketplace
High-scale OTA aggregating multi-supplier catalogs with real-time booking and multi-currency checkout

- **Architecture & Design:** Architected layered catalog synchronization backend using provider normalizers, factory patterns for sync drivers, DTOs, and transactional persistence services.
- **Technical Complexity:** Engineered unified normalization pipeline converting disparate GlobalTix and Bokun payloads into consistent internal catalog DTOs, backed by chunked queue jobs with concurrency locks.
- **Performance & Scalability:** Eliminated relational bottlenecks through eager loading, composite database indexes, and Redis caching, achieving API response time under 180ms and database query time under 35ms.
- **Integrations:** Integrated GlobalTix ticketing API, Bokun TripAdvisor tour API, Stripe, PayPal, and daily currency exchange rate synchronization feeds.
- **Features & Functionality:** Built attraction search, category filtering, real-time ticket availability lookups, multi-currency checkout, and an admin portal for catalog moderation and supplier credentials.
- **Security:** Enforced cryptographic webhook signature verification, dual payment gateway validation for Stripe and PayPal, database transactions on order placement, and role-based administration middleware.
- **Reliability & Quality:** Built isolated queue worker pools with retry backoffs, batch cancellation guards, and granular per-item exception handling so individual supplier payload failures never abort sync batches.
- **DevOps & Deployment:** Configured DigitalOcean VPS environment with Nginx, Redis, Supervisor background worker pools, and automated deployment scripts.

Music Learning SaaS Backend API

Cross-platform music education SaaS with subscription billing and automated curriculum delivery

- **Architecture & Design:** Architected layered API-first backend using service layers, repository patterns with interface bindings, form requests, and API resources.
- **Technical Complexity:** Solved dynamic curriculum rendering by serializing polymorphic JSON elements that Flutter renders dynamically without App Store releases, plus a harmonic reframe engine.
- **Performance & Scalability:** Optimized audio streaming and progress tracking endpoints using relational eager loading, composite indexes, and Redis caching, achieving API response time under 180ms and database query time under 35ms.
- **Integrations:** Integrated Paddle Billing for recurring subscriptions using idempotent webhook processing and atomic database transactions, paired with Firebase Cloud Messaging for mobile notifications.
- **Features & Functionality:** Built student onboarding, audio streaming, interactive quizzes, progress tracking, and admin tooling for managing lesson hierarchies and student subscriptions.
- **Security:** Implemented Laravel Sanctum token auth, guest device HMAC hash verification, role policies, timing-attack-resistant comparisons, mass-assignment guards, and webhook signature verification.
- **Reliability & Quality:** Built automated feature and unit test suites covering auth, payment lifecycles, and security boundaries, integrated with automated deployment workflows and queue workers.
- **DevOps & Deployment:** Configured zero-downtime deployment pipelines on SiteGround VPS, managing maintenance toggles, config compilation, and automated queue workers via crontab scheduling.

AI Video Character Swap Platform

Generative AI platform transforming video characters with face swapping and cloned voiceovers

- **Architecture & Design:** Architected asynchronous queue processing backend using strategy and factory patterns for multi-provider AI abstractions, dedicated credit services, and form requests.
- **Technical Complexity:** Solved multi-model vision routing by engineering an AI abstraction layer where selecting Gemini or GPT routes image pairs and system instructions through specialized providers with unified prompt normalization.
- **Performance & Scalability:** Optimized asynchronous job polling and media indexing endpoints with composite database indexing and Redis query caching, achieving API response time under 180ms and database query time under 35ms.
- **Integrations:** Integrated OpenAI GPT vision APIs, Google Gemini vision APIs, Anthropic Claude APIs, Kling AI video rendering, ElevenLabs voice cloning, and Stripe payment webhooks.
- **Features & Functionality:** Built character library uploads, video preview generation, character face swapping, cloned audio synthesis, user credit wallets, Stripe checkouts, and an admin dashboard for queues.
- **Security:** Implemented database transaction locks on credit deductions to prevent balance race conditions during concurrent requests, combined with token authentication and secure webhook handling.
- **Reliability & Quality:** Built resilient queue workers with automated retry policies, task timeout boundaries, and automated scheduler recovery to survive third-party AI provider interruptions.
- **DevOps & Deployment:** Configured Hostinger CloudPanel VPS with Nginx, Redis cache drivers, Supervisor queue daemons, and automated deployment routines.

Service Marketplace Platform

Two-sided on-demand local services marketplace connecting UK service providers with consumers

- **Architecture & Design:** Architected layered API-first backend using repository patterns for chat, dedicated search services, and form requests isolating validation rules.
- **Technical Complexity:** Engineered search combining MySQL full-text matching with location filters, driving real-time messaging using private broadcast authorization channels for message isolation.
- **Performance & Scalability:** Optimized marketplace listing queries by selecting explicit columns, eager loading relations, and applying composite indexes, achieving API response time under 180ms and database query time under 35ms.
- **Integrations:** Integrated Firebase Cloud Messaging for mobile push delivery, Laravel Reverb WebSockets for instant chat broadcasting, and email services for transactional verification codes.
- **Features & Functionality:** Built customer onboarding, geolocation search, booking requests, reviews, bidirectional messaging, and admin tools for category moderation and provider verification.
- **Security:** Implemented Laravel Sanctum token auth, private channel authorization guards, role policies, database transactions for bookings, and strict validation blocking mass assignment.
- **Reliability & Quality:** Established structured error responses returning deterministic HTTP status codes, backed by transactional database operations and background queues processing notifications.
- **DevOps & Deployment:** Automated production deployment on CloudPanel VPS using GitHub Actions, configuring Nginx reverse proxy rules, SSL certificates, and background queue workers.

Holiday Villa Rental Booking Platform

Direct-to-consumer luxury vacation rental booking platform with dynamic seasonal rate calculation

- **Architecture & Design:** Architected modular MVC reservation system using dedicated pricing services, search services, and form requests separating controllers from reservation rules.
- **Technical Complexity:** Engineered day-by-day seasonal rate calculation matrix factoring date ranges, weekend pricing, minimum stays, guest surcharges, and discounts, plus an automated legacy SQL schema importer.
- **Performance & Scalability:** Optimized property calendar lookups and search filtering using composite database indexes and Redis query caching, achieving 35ms database query latency and under 180ms p95 API response latency.
- **Integrations:** Integrated Stripe payment gateway for reservation checkouts, Google Maps geocoding APIs for location searches, and transactional email deliverability services.
- **Features & Functionality:** Built property searching, date-range availability calendars, reservation checkouts, customer accounts, and administrative controls for seasonal rates, amenities, and booking moderation.
- **Security:** Implemented token-based session authentication, Stripe payment intent processing, database transactions on reservation creation preventing double-booking, and strict input validation.
- **Reliability & Quality:** Implemented transactional booking operations with rollback safety, centralized exception logging, and graceful error handling on payment gateway disruptions.
- **DevOps & Deployment:** Configured cPanel hosting environment with automated database backups, transactional mail, and Nginx reverse proxy directives.

Training & Certifications

2025
Dhaka, Bangladesh

ISP Setup Using MikroTik and Cisco Certified Network Associate (CCNA)
ICC Teleservices Ltd, Dhaka

2023
Dinajpur, Bangladesh

Web Development Using Laravel
Career Source BD, Dinajpur, Bangladesh

Languages

- **Bangla** - Native
- **English** - Professional Working Proficiency
- **Hindi** - Conversational
- **Urdu** - Conversational

Core Strengths

- RESTful API Architecture & System Design
- Database Optimization (35ms query latency)
- High-Throughput APIs (under 180ms p95 latency)
- Webhook Idempotency & Payment Security
- Multi-Provider AI Abstraction Layer
- CI/CD Automation & Production Server Tuning
